Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: claims 95-102, 104-127, and 130 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically a user interface for generating a visual display for design and modeling of an automobile, comprising: a display of a parent profile representing an outline for design, the outline delineating a shape of the automobile, the parent profile including segments, each of the segments having at least one dimensional characteristic, an icon for selecting at least one segment of the segments, and an icon for evolving the parent profile, and wherein, in response to the user selecting the at least one segment by selecting the icon for selecting with the user actuable controller, the processor modifies the at least one dimensional characteristic of the at least one segment to produce a modified segment, and causes the display to display the modified segment, and wherein, in response to the user selecting the icon for evolving the parent profile with the user actuable controller, the processor performs evolving of the

Art Unit: 2129

parent profile using a genetic algorithm as disclosed in independent claims 95 and 130 of the instant application (as defined at e.g., pg. 3, L14-31; pg. 5, L2 to pg. 6 L3; pg. 7, L8-13; pg. 17, L20 to pg. 18, L9 of the specification of the instant application).

- 2. A practical application for the invention is disclosed on page 2: " The present invention incorporates a genetic algorithm into a design process, such as for new automobiles, in order to shorten the design cycle, increase productivity, and substantively enhance creativity in the design process. An object of the present invention is to shorten design development time and to allow a designer to quickly generate high quality concepts or profiles."
- 3. The claimed computer readable medium has been interpreted as a tangible computer memory such as e.g., the secondary memory of various computers of "a distributed server" (as disclosed at p. 6).

The Prior art of reference Bentley et al. (Bentley),
"Conceptual Evolutionary Design by a Genetic Algorithm", 1996,
describe a genetic design method executable on a computer

Art Unit: 2129

comprising: selecting a parent profile representing an outline for designs the outline delineating a shape of a physical structure; dividing the parent profile into segments, each of the segments having at least one dimensional characteristic, and evolving the parent profile using a genetic algorithm to produce an offspring profile with a variation in the at least one dimensional characteristic of at least one of the segments, the offspring profile representing a new outline for the design the new outline delineating a new shape of the physical structure.

The Prior art of reference of Bentley in view of Jones et al. (Jones), "Development and Validation of a Genetic Algorithm for Flexible Docking", 1997, describe a genetic design method as claimed in the parent claim, wherein at least one of the profiles includes a relationship between at least two of the segments describe the relationship including a radius parameter.

Neither Bentley nor Jones teaches a user interface for generating a visual display for design and modeling of an automobile, comprising: a display of a parent profile representing an outline for design, the outline delineating a shape of the automobile, the parent profile including segments, each of the segments having at least one dimensional characteristic, an icon for selecting at least one segment of the segments, and an icon for evolving the parent profile, and

wherein, in response to the user selecting the at least one segment by selecting the icon for selecting with the user actuable controller, the processor modifies the at least one dimensional characteristic of the at least one segment to produce a modified segment, and causes the display to display the modified segment, and wherein, in response to the user selecting the icon for evolving the parent profile with the user actuable controller, the processor performs evolving of the parent profile using a genetic algorithm as specified in the independent claims of the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
